Volcanoes in Central America.

Located along the **Ring of Fire**, the Central America isthmus contains many volcanoes, some are clearly dormant with unknown details on their last eruptions, while others are considered potentially active, and a few are currently active and have erupted in modern times.

According to volcanologists, the vast percentage of potentially damaging volcanoes stand in Costa Rica, El Salvador, Guatemala, and Nicaragua; Belize has none, Panama has one and Honduras has four long inactive ones (*not shown*).
